DETAILED ACTION

Claims 1-42 are pending in the application

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-31 and 35-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mueller {US Pat. 4,480,124}.

Mueller teaches a composition comprising low color/colorless polytetramethylene ether glycol (Ptmege) and a Group VIII metal hydrogenation catalyst as well as a process for producing low color or colorless Ptmege comprising contacting Ptmege with hydrogen in the presence of a Group VIII metal hydrogenation catalyst (i.e., raney-nickel, platinum or palladium), wherein the Ptmege after hydrogenation has an APHA color of less than 50 and a molecular weight between 250-5000 (see Examples 1-3; Col. 3, lines 60-68 thru Col. 4, lines 1-23). The presently claimed limitations such as LHSV, percent color

reductions and UV absorption would have been also realized from the Mueller process for producing low color or colorless Ptmeg.

The difference between the presently claimed invention and what is taught by the Mueller reference is that Mueller process is concerned producing low color polytetramethylene ether glycol while the presently claimed invention is producing low color polytrimethylene ether glycol (PO3G).

However, since the present PO3G differs from the Ptmeg taught by Mueller by only one methylene unit (-CH₂-) then it would not be unreasonable for one having ordinary skill in the art to expect that these homologs (i.e, the PO3G and Ptmeg) would behave similarly in the Mueller process for obtaining low color of the said glycol polymers. Thus, one having ordinary skill in the art abreast of the Mueller invention, would have been motivated to also produce low color PO3G which could be utilized as fibers and films. Therefore, the presently claimed invention would have obvious to one having ordinary skill in the art.

Allowable Subject Matter

The following is a statement of reasons for the indication of allowable subject matter: The subject matter of claims 32-34 is neither taught nor suggested by the prior art of record.
